

Carboline Company
350 Hanley Industrial Court
St. Louis, MO 63144

St. Louis, MO – February 25, 2008 – Carboline a leading manufacturer of High Performance Coatings is proud to announce the release of two new products; Carboguard 690 and Phenoline 341, which became available to customers earlier this month.

Carboguard 690 and Phenoline 341 extend the already popular phenalkamine epoxies (635, 691, and 615HS). “690 offers all the benefits of this technology in a Rapid Tint System for custom colors. As for 341 we’ve already completed a number of projects for crude oil, fuels, and potable water. Feedback from contractors has been very positive because the product is extremely applicator friendly, and is a good looking product.” said Steve Harrison – Product Manager.

Carboguard 690 is a versatile epoxy with outstanding wetting and adhesion properties, quick-cure characteristics, and extreme tolerance of high moisture conditions both during and after application. It has low-temperature curing (20°F) capability, extending the painting season. It is available in a variety of custom colors through a rapid tint system (RTS).

Phenoline 341 is a solvent free epoxy that excellent resistance to crude oil, fuel oils, potable water, and wastewater exposures making it ideal as a lining system for storage tanks with these cargos

Carboline has been a leading manufacturer and supplier of innovative High Performance Coatings for the Industrial, Commercial, and Architectural for more than 60 years.
